New human kinase peptides useful as models or targets for the development of therapeutic agents that modulate kinase activity, for eliciting immune response, and in identifying compounds that modulate kinase activity or expression

Claim 1; Fig 2; 207pp; English.

The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in biological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are transgenic animals expressing all or a part of the nucleic acid, for

New isolated human kinase proteins, useful as models for developing human therapeutic targets, or for treating a disorder associated with an absence of, inappropriate or unwanted expression of the protein, e.g. N-PSDB; AAD59937, AAD59938.

Claim 1; Fig 2; Opp; English.

The present invention relates to human kinase proteins and nucleic acids encoding them all of which are useful in the development of human therapeutics and diagnostic composition and methods. The invention is useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents. The invention is also useful in

                                                                                                          Region
   drug screening assays, in assays to determine the biological activity of the protein, to raise antibodies and to elicit another immune response. The antibodies are useful in pharmacogenomic analysis, for inhibiting protein function and for tissue typing. The transgenic animals are useful for studying the function of kinase protein, identifying and evaluating modilators of kinase protein activity. The invention is also used in gene therapy. The present sequence is the human kinase protein. The human kinase gene is located on chromosome 12
                                                                                                                                                                                                                                                                                                             240

```
The present invention provides a kinase polypeptide and its encoding bolynucleotide. The polypeptide and polynucleotide of the invention are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic gents that modulate kinase activity in cells and tissues that express the kinase. The invention is also useful for biological assays related to kinases, in drug screening assays, for treating disorders characterized by an absence of inappropriate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human kinase proteins and nucleic acids, useful for developing human therapeutic targets, identifying therapeutic proteins serve as targets for the development of human therapeutic agents that modulate kinase activity.

The present sequence represents a human citron rho/rac-interacting kinase—short kinase polypeptide. The polynuclectide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obssity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

```
The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic proteins, and serve as targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic gapnts that modulate kinase activity in cells and tissues that express the kinase. The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in biological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are useful as hybridisation probes, in constructing vectors, host cells or transgenic animals expressing all or a part of the nucleic acid, for monitoring the effectiveness of modulating compounds on the expression or equivity of the transporter gene expression in cells, tissue and organisms. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human kinase peptides useful as models or targets for the development of therapeutic agents that modulate kinase activity, for eliciting immune response, and in identifying compounds that modulate kinase activity or

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics

Claim 1; Page 100-101; 586pp; English

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit comprising in one or more containers, the composition described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (5) a cell comprising the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject; (9) a disease associated with altered levels of expression of the above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or aberrant physiological interactions of the polypeptide; (11) a method of sorreming for a modulator of activity or of latency or predisposition to a pathology associated with the above polypeptide in a commanal; and (14) a method for producing the above polypeptide in a commanal; and (14) a method for producing the above polypeptide in a commanal; and antilipaemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a medicament for treating a colypeptide is useful in manufacturing a medicament for treating and antilipaemic activities, and can be used in gene therapy. The polypeptide is useful in manufacturing a medicament for treating and antilipaemic activities, and can be used in gene therapy. The colypeptide is useful in manufacturing a pathology associated with a hardson or prevent metabolic acid molecule may be used to diagnose, treat or prevent metabolic collected in the parafer pharmacogenomics. The present sequence represents a human NOVX from the present invention. disease, immune disorders, haematopoietic disorders and various dyslipidaemias. The nucleic acids can also be used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine an

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polymucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The invention relates to isolated NoVX polypeptides and polymucleotides.

NoVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the abberrant expression and activity of NoVX polypeptides. For example, NoVX polypeptides and activity of NoVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NoVX polypucleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NoVX polypeptides and sassays to identify modulators the production of antibodies and in assays to identify of NoVX. The anti-NoVX polypeptide and indices and antagonists and antagonists and antagonists and antagonists and antagonists and activity of NoVX. Coused to modulate NoVX polypeptide expression and activity of NoVX polypeptides. The anti-NoVX polypeptide antibodies may also be used as diagnose and treat: metabolic disorders, diabetes, obesity, infectious diagnose and treat: metabolic disorders, diabetes, obesity, infectious dispundences associated with obesity, the metabolic syndrome X and chematopoietic disorders, and the various dyslipidaemias, metabolic disorders, and the various dyslipidaemias, metabolic conference of a human NoVX protein.

catherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arreniosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lippid disorder (e.g., fatty liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, hyperstipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a disquestic test for a condition or a disease associated with the expression of PKIN in a condition or a disease associated with the expression of FKIN in a antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN. PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human

```

The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, treating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, asthma,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polymucleotide encoding a human citron rho/rac-interacting kinase polypeptide. The isolated control to the polymucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) polypeptide and polymucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hypertipidaemia, stroke, gout, osteoarthritis, some types of cancer including endomerrial, breast, prostate and colon cancer), anorexia, cachexia, bullmia, central nervous system disorders (e.g. mood disease), chronic obstructive pulmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary central nervous system disorder, or chronic obstructive pulmonary contral nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a cancer in producing and detecting the polymucleotide and polypeptide and consecutive pulmonary colypeptide. This sequence represents the human CRIK protein of the human CRIK protein of the

(MDPK) polypeptides designated as 13245 and nucleic acid molecules encoding such polypeptides. 13245 molecules are used to develop diagnostic and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating or curing MDPK-related disorders. Polypeptides of the invention are used to develop diagnostic and therapeutic agents for 13245-mediated or related disorders such as tumourigenesis tumour growth, tumour metascasis, viral infection of a cell, skeletal muscle disorders (e.g. muscular and myotonic dystrophies), immune disorders and neoplastic disorders. The invention is also used in gene therapy. The present sequence is human MDPK protein
                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pain modulation; pain disorder; painful disorder; potassium channel; kinase expression; inflammatory pain; chronic pain; neuropathic pain; causalgia; fibromyalgia; cancer pain; migraine; headache; tissue pain; analgesic; antiinflammatory.

The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises assaying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity e.g. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache pain and tissue pain. The present sequence represents a human protein associated with pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
